Step-by-Step Example: Modeling a Simple Purchase Order Process in Bizagi

Scenario Overview

Imagine a basic purchase order process involving the following steps: 1. The customer places an order. 2. The sales team reviews the order. 3. If approved, the order is processed. 4. The invoice is sent to the customer. 5. The process concludes once the payment is received. This simple example demonstrates core BPMN elements and how Bizagi can model them effectively.

Creating the Process Model in Bizagi

Follow these steps to model the process:

1. **Start Event:** Drag a Start Event onto the canvas labeled "Order Received".
2. **Customer Place Order:** Add a Task named "Receive Customer Order".
3. **Review Order:** Connect it with a sequence flow to a Task "Review Order".
4. **Decision Gateway:** Insert an Exclusive Gateway labeled "Order Approved?".
5. **If Approved:** Connect "Order Approved" flow to a Task "Process Order".
6. **Send Invoice:** Link to a Task "Send Invoice".
7. **Payment Received:** Add an Event "Payment Received".
8. **End Event:** Connect the flow to an End Event labeled "Process Complete".

Using BPMN Elements in Bizagi

- Events: Represent process start, intermediate, or end points (e.g., start event for order received). - Tasks: Indicate work activities (e.g., review order, send invoice). - Gateways: Control process flow (e.g., decision points like approval). - Sequence Flows: Show the order of activities. - Artifacts: Additional information such as data objects or annotations.

Validating and Sharing the Model

Bizagi provides validation tools that check for common modeling errors, ensuring the process adheres to BPMN standards. Once validated, models can be exported as images, PDFs, or shared directly within the platform.

Advanced BPMN Elements and Their Application in Bizagi

Handling Complex Processes with BPMN

As processes grow in complexity, BPMN offers advanced elements to handle various scenarios:

1. **Parallel Gateways:** For concurrent activities.
2. **Inclusive Gateways:** For decision points with multiple possible paths.
3. **Event-Based Gateways:** Triggered by specific events.
4. **Sub-Processes:** Encapsulate detailed process sections.

5. **Data Objects and Data Stores:** Represent information flow and storage.

Example: Modeling an Order Cancellation Process

Suppose customers can cancel orders before shipment. This process involves: - An intermediate timer event checking if the order is still pending. - A decision gateway to confirm cancellation. - Notification tasks for informing relevant departments. In Bizagi, you can incorporate these elements to produce detailed models that support process automation and analysis.

Implementing Advanced Elements in Bizagi

- Use the Sub-Process feature to group related activities. - Drag and connect Gateways for complex decision-making paths. - Attach Events to handle exceptional scenarios like cancellations or delays. - Model Data Objects to track order status and customer information.
