Second Law: The acceleration of an object is directly proportional to the net force acting upon it and inversely proportional to its mass ($F = ma$). 3. Third Law: For every action, there is an equal and opposite reaction.

Fundamental Principles and Laws of Classical Mechanics

Classical mechanics is built upon a set of fundamental principles that describe the behavior of particles and systems under various forces.

Newton's Laws of Motion

The three laws are: 1. First Law (Inertia): An object remains at rest or in uniform motion in a straight line unless acted upon by an external force. 2. Second Law: The acceleration of an object is directly proportional to the net force acting upon it and inversely proportional to its mass, expressed as $F = ma$. 3.
