Example 1: Pattern Recognition Question: What comes next in the sequence: 2, 4, 8, 16, ___?
Options: a) 20 b) 24 c) 32 d) 36
Answer: c) 32
Explanation: The sequence doubles each time. $2 \times 2 = 4$, $4 \times 2 = 8$, $8 \times 2 = 16$, so the next number is $16 \times 2 = 32$.

Explanation: The statement "some flowers fade quickly" is linked to roses only through the category of flowers, but it does not specify that roses are among the flowers that fade quickly, so the only safe conclusion is that some flowers that fade quickly could be roses. Example 3: Numerical Reasoning Question: A train travels at a speed of 60 km/h. How far will it travel in 45 minutes? Options: a) 30 km b) 45 km c) 50 km d) 55 km Answer: a) 45 km Calculation: Speed = 60 km/h Time = 45 minutes = 0.75 hours Distance = Speed $\times$ Time = 60 $\times$ 0.75 = 45 km Note: The correct answer is 45 km; ensure to convert minutes into hours when solving.
