Composer: `composer create-project drupal/recommended-project my_site_name` - Follow the installation wizard to configure your site.

Core Concepts of Drupal 10 Development

Understanding Drupal Architecture

- Entities: Content, users, taxonomy terms, and custom entities. - Modules: Extend core functionality. - Themes: Control site appearance. - Configuration Management: Exporting and importing site configurations. - Routing and Controllers: Handle URL mapping and page rendering.

Using the Drupal API

Familiarize yourself with: - Entity API - Form API - Cache API - Plugin API - Dependency Injection

Developing Custom Modules in Drupal 10

Module Development Workflow

1. Create a custom module folder inside ``/modules/custom/``. 2. Define a ``.info.yml`` file:
name: My Custom Module type: module description: 'Provides custom features for my site.' core_version_requirement: ^10 package: Custom 3. Enable the module via Drush:
`drush en my_custom_module` 4. Add hooks, services, and plugins as needed.

Implementing Hooks and Services

- Use hooks to alter core behaviors: function
`my_custom_module_node_insert(Drupal\Core\Entity\EntityInterface $node)` { // Custom logic here. } - Define services in ``.my_custom_module.services.yml`` for dependency injection.

Creating Custom Plugins

Plugins allow for flexible extension points: - Extend existing plugin types or define new ones. - Use annotations for plugin discovery. - Example: Custom block plugins.

Theme Development in Drupal 10

Creating a Custom Theme

- Generate a new theme skeleton using Drupal Console: `drupal generate theme` - Define your theme in ``.info.yml``: name: My Custom Theme type: theme

core_version_requirement: ^10 base theme: stable regions: header: 'Header'
primary_menu: 'Primary Menu' content: 'Content' footer: 'Footer' - Enable your theme.

Customizing Templates and Assets

- Override Twig templates for pages, blocks, nodes, etc. - Use preprocess functions for dynamic data injection. - Add CSS/JS assets in your theme's `.libraries.yml` file.

Configuration Management in Drupal 10

Exporting and Importing Configuration

- Use Drush commands: `drush config:export` `drush config:import` - Manage configurations via YAML files stored in `/config/sync`.

Best Practices for Configuration

- Keep environment-specific configurations out of version control. - Use separate configuration directories for development, staging, and production. - Regularly review configuration changes before deploying.

Performance Optimization Techniques

Caching Strategies

- Enable cache tags and contexts. - Use dynamic page caching for anonymous users. - Implement Redis or Memcached for external caching layers.

Optimizing Database Performance

- Regularly run database maintenance tasks. - Use index optimization. - Enable query logging to identify slow queries.

Front-End Optimization

- Minify CSS and JavaScript assets. - Use a CDN for static assets. - Optimize images and media files.

Security Best Practices in Drupal 10

Keeping Drupal Core and Modules Updated

- Regularly update Drupal core and contributed modules. - Subscribe to security advisories.

Implementing Security Measures

- Use HTTPS across your site. - Configure permissions carefully. - Enable two-factor authentication. - Use security modules like Security Kit and Paranoia.

Testing and Debugging in Drupal 10

Writing Tests

- Use PHPUnit for unit testing. - Use Behat for behavioral testing. - Write kernel and functional tests for modules.

Debugging Tools

- Use Devel module for debugging. - Use Xdebug for step-through debugging. - Enable verbose error reporting during development.

Deployment and Version Control

Using Git for Version Control

- Initialize a Git repository. - Commit core and custom code separately. - Use branches for features and releases.

Deployment Strategies

- Use Composer to manage dependencies. - Automate deployments with CI/CD pipelines. - Backup databases and files before deployment.
