Construction Cost Management

Quantity Surveying is a professional discipline that manages the financial aspects of a construction project. It involves estimating the cost of materials, labour, and other resources required for the project, and then monitoring and controlling those costs throughout the project's lifecycle. This ensures that the project is completed within the allocated budget.

Contract Administration

Contract administration is the process of managing the legal and financial aspects of a construction contract. It involves ensuring that all parties to the contract understand their obligations and rights, and that the contract is enforced as written. This includes negotiating the terms of the contract, issuing payment certificates, and resolving any disputes that may arise.
