Axial Skeleton Includes the skull, vertebral column, and rib cage. **Skull** - Houses the brain, sensory organs, and the oral cavity. - Comprises the cranium and facial bones. - Features a well-developed jaw with strong muscles for biting. **Vertebral Column** - Consists of cervical, thoracic, lumbar, sacral, and caudal vertebrae. - Provides flexibility and support for movement. - The number of vertebrae varies among breeds, especially in the tail region. **Rib Cage** - Protects thoracic organs like the heart and lungs. - Composed of ribs attached to the thoracic vertebrae. **Appendicular Skeleton** Includes the limbs and girdles. **Forelimb (Thoracic Limb)** - Consists of scapula, humerus, radius, ulna, carpals, metacarpals, and phalanges. - Allows for weight-bearing, movement, and manipulation. **Hindlimb (Pelvic Limb)** - Composed of pelvis, femur, patella, tibia, fibula, tarsals, metatarsals, and phalanges. - Facilitates running, jumping, and stability. **Notable Skeletal Variations** - Breed-specific differences in skull shape (brachycephalic vs. dolichocephalic). - Tail length variations (long, docked, or absent in certain breeds).

Muscular System of the Dog The muscular system enables movement, supports posture, and plays a role in respiration and other vital functions. **Types of Muscles**

1. **Skeletal Muscles** - Voluntary muscles attached to bones. - Responsible for locomotion.
2. **Smooth Muscles** - Found in internal organs (e.g., gastrointestinal tract, blood vessels). - Involved in involuntary movements.
3. **Cardiac Muscle** - Constitutes the heart. - Facilitates blood circulation.

Major Muscle Groups in Dogs
