Sample Problems for a Punnett Square Practice Worksheet

Problem 1: Monohybrid Cross

Question: A purebred tall pea plant (TT) is crossed with a short pea plant (tt). Create a punnett square to determine the possible genotypes and phenotypes of their offspring. Solution Steps: - Parental genotypes: TT and tt - Gametes: T and T from

one parent; t and t from the other - Punnett square:

T	T
t	t

 Results: - Genotypic ratio: 100% Tt - Phenotypic ratio: 100% tall

Problem 2: Dihybrid Cross

Question: In pea plants, yellow seed color (Y) is dominant over green (y), and round seed shape (R) is dominant over wrinkled (r). A heterozygous yellow round seed plant is crossed with a green wrinkled seed plant. Construct the punnett square and determine the probabilities of each phenotype. Solution Steps: - Parental genotypes: YyRr and yyrr - Gametes: YR, Yr, yR, yr and y r, y r (assuming the second parent can only produce y r) - Construct the punnett square accordingly and analyze. Results: - List all possible offspring genotypes - Calculate phenotypic ratios for yellow/round, yellow/wrinkled, green/round, green/wrinkled
