What Are Arithmetic and Geometric Sequences?

Before diving into worksheets, it's crucial to understand the core concepts of arithmetic and geometric sequences.

Arithmetic Sequences

An arithmetic sequence is a list of numbers where each term is obtained by adding a fixed number, called the common difference, to the previous term. For example: - 2, 5, 8, 11, 14, ... - Here, the common difference is 3. Key features of arithmetic sequences:

2. General form: $a_n = a_1 + (n-1)d$, where a_1 is the first term and d is the common difference
3. Useful in real-world scenarios like savings plans, population growth, etc.

Geometric Sequences

A geometric sequence involves each term being multiplied by a fixed number called the common ratio to obtain the next term. For example: - 3, 6, 12, 24, 48, ... - Here, the common ratio is 2. Key features of geometric sequences:

1. Multiplicative pattern between terms
2. General form: $a_n = a_1 \times r^{n-1}$, where r is the common ratio
3. Commonly found in exponential growth or decay models
