Understanding Swarm Intelligence: An Overview

Swarm intelligence refers to the collective behavior of decentralized, self-organized systems, typically composed of simple agents interacting locally with one another and their environment. Unlike traditional algorithms that rely on centralized control, swarm intelligence systems operate through simple rules followed by individual agents, leading to the emergence of complex, intelligent global behaviors.

Key Characteristics of Swarm Intelligence

2. **Self-organization:** Agents organize themselves based on local information and simple rules.
3. **Flexibility:** Swarm systems adapt dynamically to changes in the environment or task requirements.
4. **Robustness:** The system can tolerate individual agent failures without collapsing.
5. **Scalability:** The approach works efficiently across small and large populations of agents.
